NOTICE OF
ANNUAL WATER SYSTEM MAINTENANCE

During July 18, 2024, through August 8, 2024, the City will conduct annual water system maintenance. At least annually, the entire City water system needs to be flushed to maintain the highest levels of quality of the water supply.

During the process, the water will remain safe to drink and safe to use. The City will continuously monitor water quality during this period.

The most noticeable part of this process is that City personnel will periodically open fire hydrants at various locations in the City and allow them to remain open for an extended period.

This annual flushing process helps to maintain our consistently high levels of water quality. For those interested in the overall quality of the City's water, please visit the city website (www.cityofgrahamtexas.com) and view the '2023 Consumer Confidence Report and Water Audit for Public Water System City of Graham'.

Questions about this annual system maintenance may directed to the Public Works Director, Randall Dawson (rdawson@grahamtexas.net) or City Manager, Eric Garretty (egarretty@grahamtexas.net).

Thank you for your patience and understanding as we conduct this maintenance process that helps us ensure the quality of our vital water supply.
